

LIVE VOTING PLATFORM FOR EVENTS

Televoto

Turn your audience into a jury. Real-time voting, live rankings, and a grand Final Ranking reveal — no app to install.

General overview — document for prospective adopters

What is Televoto

Televoto is a web platform designed for organizers running **events with live voting**: talent shows, artistic or sports competitions, hackathons, festivals, corporate or school contests. It replaces paper ballots, spreadsheets, and manual counting with a real-time digital system, accessible from a smartphone via a simple link or QR code — no app to download, no account to create for voters.

How it works, in 3 phases

1

Set up the event

The organizer creates the event, adds the candidates/competitors, and generates the access codes for judges and the public.

2

Live voting

Judges and the public receive a link or a QR code, open the page on their phone, and assign a score to each candidate.

3

Ranking and reveal

The final score is calculated automatically and revealed with a dedicated scenic effect: the **Final Ranking**.

Key features

Dual voting channel

Qualified jury (weighted vote) and general public, combined with customizable weights per event (e.g. 70% jury / 30% public).

Single-use voting codes

Every voter receives a unique code shared via link or QR, valid for one vote per candidate: no duplicate votes.

Live dashboard

The organizer sees in real time how many codes have been used and how voting is progressing, without needing to reload the page.

Multi-event management

A central panel to organize multiple events, each with its own candidates, codes, and password, fully isolated from one another. Wrapped-up events archive in one click and can be cloned to restart from an already-ready format.

Configurable scoring

Weighted average between jury and public, with an optional "trimmed mean" to reduce the impact of anomalous or outlier votes.

Final Ranking

A final-ranking reveal screen designed for the event's key moment, in front of the audience.

Who it's for

Televoto adapts to any live event where a vote needs to be collected from multiple people, quickly and transparently:

Talent shows

Competitions and contests

Hackathons

Festivals and cultural events

Corporate events

School contests

Music contests

Fairs and fêtes

Zero friction for voters

Just open a link or scan a QR code from your phone. No registration, no personal data required, no app to install.

Security and reliability

Separate access levels

Dedicated password for the general administrator and for each individual event organizer.

Protected codes

Voting codes are opaque and single-use, stored only in encrypted form: never in plain text in the system.

No tracking

Voters are not profiled: no personal data or device identifier is collected.

Why choose it

Ready in minutes

Creating an event, adding candidates, and generating codes takes just a few guided steps.

Browser only, no app

Works on any smartphone or tablet with a connection, no installation required.

Automatic counting

Zero calculation errors: the final score is generated by the system according to transparent, configurable rules.

Guaranteed showstopper moment

The Final Ranking turns the results announcement into a show moment designed for the audience in the room.

Ready to bring live voting to your next event?

Televoto is the solution for anyone who wants to engage the audience and the jury in real time, with a system that's simple, secure, and built for the drama of the verdict moment.
